

Digicraft at Udevelop is proud to introduce online ordering for JPEG's. Now you can get the same high quality results you've come to expect from Digicraft with orders placed over the Internet. This is a special service for JPEG's only.

Fuji crystal archive Type C Glossy and Matte are the only surfaces available on this service at this time. Frontier prints up to (all sizes up to 10x15) are available the next weekday at 5pm. Chromira prints (11x14 and larger prints) will be ready in 2 weekdays at 5pm. There is a \$15 minimum order.

Click [HERE](#) for price list.

If your images are organized in folders, you can select a folder and everything in it will be loaded automatically. If all files are ready to print a single size, use the Express function to complete your order quickly. The express function is not recommended for print orders larger than 8x10. Full frame printing is available on any size paper. All images will be printed without cropping, preserving the aspect ration of your camera's image capture. For instance, a 1:2 Panorama on 10x15 full frame will be 7.5x15. Automated Full Print will crop your image to fit the paper size. We recommend using the edit function to crop pictures to your preference. To see an example of these options click [HERE](#).

For best uploading results we recommend using the latest version of Java, but a Flash uploader is available as well for your convenience. We will e-mail you before printing if we have any questions about your order or in response to any questions or directions from you. Anytime you want to talk to us, call 1.877.223.6364.
